Project Proposal:

Car Renting Site

NAME: Toufiq

DEPT. OF CSE, NUBTK.   ID:11170320116

Introduction

The Car Rental System is a very demanding system for todays day-to-day life. People are now using online car rental services. But it is not possible for every small Rent-a-car business man to afford a site like this. The system presented here is meant to be affordable for all.

Project Title

Keeping in mind the objectives of this project the project is named :

Garikoi.com

Objectives

The site is designed as simple but efficient system to maintain rental services for cars. The main objectives based on which the project is developed are listed below:

- Simple design for users
- Display available cars in a scroll
- One click booking
- Booking confirmation form
- Contact sharing
- Easy to maintain admin dashboard
- Easy input new car and details

Users

- ➢ Rent-a-Car service men
- ➢ Customers who want a ride

Advantages

- Low Budget Site
- Site is light weight with very simple database (MySQL)
- No need any API
- Smart one click booking management

Disadvantages

- Dynamic location tracking is not possible
- Payment option is not supported
-

Conclusion

The project can create an easy to use online rent a car service for local use in a small business area like Khulna.

Future Plan

The site can be further developed as an app service too. In current market it is a demanding product and can be developed according to clients wish.
